Full-Stack Web Developer | MERN Stack Specialist

Professional Summary

Detail-oriented Full-Stack Developer specializing in the MERN stack with a proven ability to build secure, scalable web applications. Experienced in designing complex database architectures, developing RESTful APIs, and integrating real-time functionality. Passionate about solving real-world problems through clean, maintainable code and efficient system design.

Technical Skills

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Bootstrap, Tailwind CSS
- **Backend:** Node.js, Express.js, PHP, C#, Flask
- **Databases:** MongoDB, MySQL, SQL Server, Redis
- **Tools & Concepts:** Git, GitHub, REST APIs, .NET Framework, Object-Oriented Programming (OOP), Socket.io, JWT Authentication

Projects

1. Lend-Sphere (Peer-to-Peer Rental Platform) | *MongoDB, Express.js, React.js, Node.js, Socket.io, Cloundinary*

- Engineered a decentralized marketplace for electronics and appliance rentals.
- Developed an algorithmic double-booking prevention system using MongoDB aggregation to ensure accurate chronological scheduling.
- Integrated real-time chat functionality using WebSockets for instant user coordination and built a Dispute Resolution Center with secure evidence hosting.
- Implemented Role-Based Access Control (RBAC) via secure JSON Web Tokens (JWT).
- URL- <https://lend-sphere.vercel.app/>

2. Smart Product Specification Matching Engine | *Python, BeautifulSoup, Node.js*

- Currently developing a dynamic product matching engine as a final-year academic project.
- Engineered automated web scraping scripts to successfully extract, clean, and format large datasets of raw product specifications from various external sources.

- Architecting the backend logic and database schema to compare and match multi-variable data points for consumer analysis.

3. TaskFlow (Task Management App) | *MongoDB, Express.js, React.js, Node.js*

- Developed a scalable task management application featuring full CRUD capabilities.
- Implemented robust user authentication and authorization pipelines utilizing JSON Web Tokens (JWT) and secure cookie-based sessions.

4. YouTube Backend Simulation | *Node.js, Express.js, MongoDB*

- Architected a comprehensive RESTful API simulating core video platform functionalities.
- Built optimized backend routes for user management, media handling, and comment threading.

Education

Bachelor of Science in Information Technology (B.Sc. IT)

Somaiya School Of Basic And Applied Science, Mumbai | Expected Graduation: 2026

- **Cumulative CGPA:** 9.17 / 10
- *Relevant Coursework: System Architecture, Database Management, Web Development.*

Achievements & Extracurriculars

- **Smart India Hackathon (SIH):** Selected to participate in the SIH Internal Hackathon, demonstrating rapid prototyping and collaborative problem-solving skills under strict deadlines.
